WIDE RANGE OF PHARMACEUTICALS

At Imres we have the widest range of generic and branded pharmaceuticals for any health programme in the market. Our range is based on the WHO list of essential medicines, but goes much further than that. Our aim is to supply the right medicines, in the right form, at the right time for your health programme.

We distribute our own Imres range of high quality, affordable generic pharmaceuticals. They are specially developed for the hospital and pharmacy market and distributed worldwide. The "Distributed by Imres" products are labelled in English, French, Spanish and Portuguese. We always keep sufficient stock of this range for immediate dispatch. In addition to this, Imres has an extensive range of other generic and branded pharmaceuticals.

To safeguard the quality of our pharmaceuticals, we continuously have GMP audits conducted by our qualified pharmacists, along with re-analysis and contra-analysis of pharmaceuticals.

ONE-STOP-SHOP

Imres maintains minimum stock levels of pharmaceuticals at all times. These pharmaceuticals are stored in our climate controlled GDP-certified warehouse in the Netherlands, where we monitor the expiration dates to ensure a sufficiently long shelf life upon shipment.

While more than 40 years of experience has enabled us to identify the best and most reliable suppliers for each of our products, Imres strives to continuously improve, expand and innovate. We constantly source new products and suppliers. This ensures that we keep our range up to date, and that we consistently provide our customers with the best prices, products and quality.

A COMPLETE MEDICAL SOLUTION IN A BOX

That is the essence of a medical kit. In this brochure, you will find an overview of our range of medical kits. If you need a solution for which there is no kit available yet, we can customise one for you.

Imres packs and distributes all types of emergency and medical kits, according to our customers' specific requirements. These range from simple to complicated kits, for a variety of purposes, assembled either from stock or specially developed and sourced for customers.

FAST & EFFICIENT

The best medicine is useless if it cannot get to where it is needed, when it is needed. We know that delays can cost lives, so our logistics solutions are designed for speed and efficiency. We hold sufficient stock of the most common medical kits. Our experienced logistics department can get stocked kits to any location in the world within 48 hours of receiving your order.

EXPERT SOURCING & FLEXIBILITY

Do you need a kit solution that is not readily available? Over the years Imres has composed many custom-made medical kits for various needs, in close collaboration with our customers. Our extensive database of quality suppliers and product combinations enables us to cater for every medical supply need that you may have. While more than 40 years of experience has enabled us to identify the best and most reliable suppliers for each of our products, Imres strives to continuously improve, expand and innovate. We constantly source new products and suppliers. This ensures that we keep our range up to date, and that we consistently provide our customers with the best prices, products and quality.

QUALITY

You want to be sure that the products for your health programme are high quality. We do not take any chances when it comes to the quality of the kits and products that we supply.

Imres has implemented an uncompromising set of quality controls, including a dedicated quality control department and independent testing in World Health Organization (WHO) pre-qualified and ISO/IEC 17025:2005 certified laboratories for pharmaceutical products. Our stringent vendor rating system sees Imres visiting and screening vendors around the world. Manufacturers must achieve our high, internationally recognised standards, and those of our customers, and that they adhere to the necessary quality control processes to qualify as an Imres vendor. All our products are screened, to ensure the quality of every item that we supply.

PROVEN SOLUTION

An Interagency Emergency Health Kit (IEHK) contains all the necessary medication and basic medical supplies for a population of 10,000 for three months. In a refugee camp with a population of 50,000, five IEHK kits provide the basic medical solution for the entire population; all conveniently packed in clearly marked boxes.

IEHK COMPOSITION

The IEHK 2017 consists of two different sets of medicines and medical devices: a Basic Unit and a Supplementary Unit. Each IEHK is designed to serve 10,000 people for three months.

All units are packed in extra sturdy boxes to ensure its contents are secure. Each box has a maximum weight of 25 kg and is equipped with convenient carrying handles on the sides.

We hold sufficient stock of IEHK's to respond quickly to any crisis or emergency situation.

1,000	1,000	1,000	1,000	1,000		
10,000					} 1 Supplementary Unit for 1 x 10,000 people	

BASIC UNIT MODULES

The Basic Unit contains essential medicines and medical devices, and can be used by primary healthcare workers with limited training. It contains oral and topical medicines, and no injectables. To facilitate distribution to smaller health facilities on site, the quantities of pharmaceuticals and medical devices in the basic unit have been divided into 10 identical units, each for 1,000 people.

SUPPLEMENTARY UNIT MODULES

The Supplementary Unit contains additional essential medicines and medical devices, and is to be used only by professional health workers or physicians. There are eight modules in the supplementary unit. One with equipment, one with renewables, one with documentation and five with medicines. Some of the modules are optional since they may not be needed in all cases.

OPTIONAL MODULES

Anti-malaria modules are available for both the Basic Unit and the Supplementary Unit. The anti-malaria module for the Basic Unit consists of a combination therapy for the treatment of uncomplicated falciparum malaria, as well as malaria rapid tests. The anti-malaria module for the Supplementary Unit consists of second line treatment injectable drugs.

The Supplementary Unit also has an optional post-exposure prophylaxis (PEP) module. It contains medicines and diagnostics for first line treatment after potential exposure to HIV infection.

The other optional modules are the cold chain medicines, the controlled medicines and the documentation module. The optional modules will only be included on specific request.

Emergency Reproductive Health (ERH) Kits have been designed primarily to provide priority reproductive health services to displaced populations without medical facilities, or where medical facilities are disrupted during a crisis. These kits contain essential drugs, supplies and equipment to be used for a limited period and a specific number of people.

ERH KIT COMPOSITION

The Reproductive Health Kits are categorised in three blocks. Each block targets a different health service delivery level. All units are packed in extra sturdy boxes to ensure its contents are secure and each box is equipped with convenient carrying handles on the sides.

BLOCK 1

Contains six kits. The items in these kits are intended for use by service providers delivering reproductive health care at community and primary health care level. Each kit is designed to provide for the needs of 10 000 people for 3 months. The kits contain mainly medicines and disposable items. Kits 1 and 2 are divided into parts A and B, which can be ordered separately.

BLOCK 2

Contains five kits with disposable and reusable supplies, for use by trained healthcare providers with additional midwifery and selected obstetric and neonatal skills at the health centre or hospital level. These kits are designed to be used for a population of 30 000 people over a 3-month period. It is possible to order these kits for a population of less than 30 000 persons; this means that the supplies will last longer. Kit 6 has two parts, A and B, which are used together but can be ordered separately.

BLOCK 3

Contains two kits with disposable and reusable supplies to provide comprehensive emergency obstetric and newborn care at the referral (surgical obstetrics) level. It is estimated that a hospital at this level covers a population of approximately 150 000 persons. The supplies provided in these kits would serve this population for 3 months. Kit 11 has two parts, A and B, which are usually used together but which also can be ordered separately.

NON-COMMUNICABLE DISEASE KIT (NCDK)

Non-communicable diseases are increasingly becoming a primary cause of death worldwide. The healthcare systems in emergency situations or low resource settings are usually not geared to treat these diseases. The WHO has developed a standardised kit that fills the gap between the Interagency Emergency Health Kit and the treatment of NCDs in primary healthcare, the Non-Communicable Disease Kit.

The Non-Communicable Disease Kit is a pre-packed, standardised medical kit for managing the most common non-communicable diseases like diabetes, cardiovascular diseases, chronic lung diseases, hypertension, cancer and selected mental health conditions. The NCDK contains oral medicines, renewables, medical devices and additional products. It serves 10.000 people for three months. The NCDK can be used in both emergency situations as well as in other low resource settings. Due to its modular set-up, it can be ordered as a complete kit, or the sub modules can be ordered independently.

HYGIENE KIT

The Hygiene Kit plays an essential role in ensuring the well-being of people in distress. Being able to maintain their basic hygiene and cleanliness is not only important for the psychological well-being of people in distress, it also helps to prevent the spread of infectious diseases.

The Imres personal hygiene kit meets the basic needs of adults and children, providing quality, care and comfort to those who receive it.

This kit comes in a convenient package and supports the hygiene requirements of a family of five. Because we keep hygiene kits in stock, Imres can respond immediately to the need for them, anywhere in the world.

DIAGNOSTICS

To prevent diseases from spreading, it is critical to be equipped to perform a quick and thorough diagnosis in the potentially affected population. Imres offers a wide range of diagnostics ranging from urine test strips for glucose to various blood tests for malaria, HIV and hepatitis B.

ONE-STOP-SHOP

Imres maintains sufficient stock levels of diagnostics at all times. They are stored in our climate controlled, GDP certified warehouse in the Netherlands, where we monitor the expiration dates to ensure a sufficiently long shelf life upon shipment. Our diagnostics are available for immediate shipment.

While more than 40 years of experience has enabled us to identify the best and most reliable suppliers for each of our products, Imres strives to continuously improve, expand and innovate. We constantly source new products and suppliers. This ensures that we keep our range up to date, and that we consistently provide our customers with the best prices, products and quality.

THE IMRES DIFFERENCE

Over more than **40 years**, Imres has proved that we are a **reliable, efficient and trusted partner** in **healthcare strengthening programmes** in developing countries.

As an organisation, we are big enough to **make a difference**, but small enough to give our customers personal attention, and to care about the difference that we are making in lives and communities, and in our partners' health projects.

We have **offices and facilities** in the **Netherlands, Dubai, India and China**.

Our **production areas** include a GMP room for secondary packing and a **Class D clean room** for primary packaging, as well as a **1000 m² kit production area**. As a supplier, we do not make promises that we cannot keep. If we commit to a project and specific deliverables, it is because we really can deliver, as promised.

Like the projects that we are **proud** to be part of, Imres has heart. We are good at what we do, but we also feel good about what we do. We feel responsible for our partners' projects until each one ends **successfully**.

Then we move onto our **next challenge**; our next opportunity to turn humanitarian dreams into **concrete solutions** and **decisive action** that saves lives.
